

reduce risk

One runway incursion happens every day.

And the results can be devastating. Honeywell's Runway Awareness Advisory System (RAAS) is a valuable safety solution that works on the ground and in the air. It helps pilots increase their situational awareness to minimize the risk of runway incursions. Adding Honeywell RAAS is as simple as upgrading the software on your Mk V and Mk VII EGPWS system. More proof that Honeywell has the equipment, worldwide service and support, and expertise to protect your investment. Because a safe flight begins before you even leave the ground. *Engage Safety.*
